

A field of **remote sim racers** races your **real SuperTT enduro** — **the same race, at the same time**, against live digital twins of your real cars, scored as their own class under **one MRA permit**. **Trial it at the Wakefield 300; scale it to the Sydney 300.**

WHAT'S IN IT FOR MRA

- **New revenue** — virtual entry fees + fresh sponsor inventory (class naming, in-sim branding, stream overlays).
- **Bigger audience** — reaches the global sim-racing community; streams natively to Twitch / YouTube.
- **A season, not a one-off** — a virtual class across all 8 rounds and the three 300 km enduros.
- **A standout story** — a genuinely novel hybrid enduro that sets MRA apart and earns media.

FITS YOUR OPERATION

- Reads your **MyLaps** timing / GPS — no change to your timing.
- Relays your one **MRA-RMC** Zello race-control voice to virtual drivers too.
- **Safety Car** → **Code 60** for the virtual field, automatically.
- One operator console **beside** Race Control.

SAFE & FAIR

- One-way: virtual cars **can never touch a real car or driver**.
- Separate class, transparent scoring; your official MyLaps result is never overridden.
- **Timed finish** — virtual cars take the chequer when your real leader completes the distance.

THE TRIAL — WAKEFIELD 300

Step	Event	When
Trial	Wakefield 300 · One Raceway	28 Feb – 1 Mar 2026
Iterate	Shelley 300 + rounds	across the season
Flagship	Sydney 300 · SMSP	season showcase

Low stakes first, flagship last — a few GPS-fitted cars, a small virtual grid, a working fallback at every step. We only ever *add* to your event.

ALREADY REAL A working, tested platform today — live timing/GPS ingestion, race-state sync (green / Code 60 / timed finish), the race-audio bridge, and combined real-vs-virtual scoring (100+ automated tests). **Honest on the frontier:** putting real cars *inside* the sim is what we're validating now — with a guaranteed fallback (synced virtual race + live combined timing & track-map), so the event is never hostage to unproven tech.

THE ASK

- Your blessing to run the **Wakefield 300 trial**.
- Access (commercial terms) to the **MyLaps X2 feed**, the **MRA-RMC Zello** channel, and a **test session**.
- A joint chat with **Motorsport Australia** on permitting a virtual class + Code 60 — you're already aligned with MA for 2026, so it starts warm.

We bring the technology, the build, and the operating crew.
